Honor Your Health by Honoring Your Skin

This product is 100 percent biodegradable. It is naïve to think we can spread synthetic chemicals on our skin, the largest living organ of the body, day after day, and not suffer the potential consequences! The effectiveness of patches that allow medications to quickly absorb through the skin should be a warning to us that much of what we put on our skin ends up in our bloodstream. Numerous name-brand personal care products use ingredients that are also found in anti-freeze and engine degreasers, including DEA, a known carcinogen found in more than 600 home and personal care products including soaps, shampoos, and lotions. From skin contact alone the body can absorb and store potentially toxic chemicals throughout the body.

May we suggest using with:
Rock - Body Deodorant
